Help.com Live Chat integrates with a variety of third-party apps such as Zendesk, Slack, Salesforce, Shopify and Magento. As with most live chat apps, .com live chat is a solution installed in the cloud. It's a price per month and unlike many ot... Read more Best video chat apps are more valuable than ever this year because we are all cut off from joining our friends and family personally. The good news is that there are many software designed to keep people together, whether they want a desktop or mobile experience. Better news is a lot of it's free. We've rounded up a list of the best video chat apps you can download now, whether you want to chat on your desktop, using your iPhone or Android phone or playing on your PC. You can even have some of it already, but have not realized all the things it can be used for. Whether you're looking for something suitable for a professional environment, such as working from home, or just wanting to talk to a friend, these are your best options. Read on to our most important highlights of the best video chat apps on many platforms. And if you are against spending money, do not be afraid: every piece of software on this list at least has a free tier - and most of them are completely free, period. What are the best video chat apps? The best video chat app in general - and which is especially popular now - is Zoom Meeting, which can be used on both your desktop and mobile phone. Zoom is free and paid tiers. The free option supports calls to 100 attendees, although sessions with three or more people on the line are limited to 40 minutes and can even run in the desktop browser window if you don't want to download the program to your computer. Skype is a good alternative to Zoom. It's a little easier to use, but also works on different platforms and initially commands nothing. It even allows you to call landline and cell numbers at reasonable prices, supports texting and can perform real-time translation as well. It's easy to use, like FaceTime, and offers a quick link to calling on Google Home devices. Facebook also offers solutions: Facebook Messenger and WhatsApp. In the spring of last year, video call features from both apps went up from 8 to 50 participants. Finally, we recommend Discord Discord features robust applications across mobile and desktop computers. In fact, Discord is designed to stream streaming games to small groups of people, and the company recently increased the cap on Go Live's free streaming service from 10 to 50 people. Here's a closer look at all the best video chat apps: The best video chat apps you can download today (Video Credit: Zoom)Works with: iOS, Android, Windows, Mac, Web | Maximum number of free users: 3 or more times the termWith friends and colleagues term Comprehensive set of featuresWork on all platformsFree tier sets restrictions on 3 or more peopleOne the best video chat programs that many people come to these days are Zoom and for good reason. Zoom is popular with professional teams, although it is also becoming more common for simple video chat due to its extensive set of features and support across all platforms , both as a local and web app on desktop computers and as a downloadable app on smartphones. Screen sharing, instant comments, and encryption are standard with Zoom, whether you're using a free version of the app or deciding to pay. If you're just chatting with one other friend in a video, the free app doesn't lock anything away from you. However, this changes when you decide to invite three or more people to a meeting, and then you have a 40-minute deadline. The \$15-a-month Pro Tier lifts that limit so you can have up to 100 people on the same call, and the business tier puts that limit even higher for the company's customers. It has been said that since the programme entered the spotlight in the early days of the pandemic, a number of zoom security flaws have been revealed. However, Zoom solves these issues, and we still recommend that you use it as safe for most people if you password protect each meeting. The April Zoom 5.0 update ensured that the program now meets the AES 256-bit GCM encryption standard and enables passwords for professional and educator licensees by default. More recently, the company has activated end-of-the-art encryption to make your calls more secure, and all this should go a long way towards curbing zoom bombing. (Video credit: Skype) Works with: iOS, Android, Windows, Mac, Web, Xbox | Maximum number of free users: 50Today's best NOPRODUCT dealsMax 50 people allowed video callsSupports international call and textCommand on all platformsBusiness tier cost moneySkype's has been the name of the list of best video chat programs for a very long time. Microsoft's offer has an impressive limit of 50 people and does nothing for you. Like Zoom, Skype also has a browser client and is available on virtually every modern computing device and smart It is also great for connecting to people who don't have their own devices, and perhaps there is only a landline or main mobile phone. Since Skype supports international calls and text exchanges, this is a comprehensive solution for friends and family. If you have specific needs, such as display sharing on your mobile phone, or transcription and translation, Skype includes these bases as well. The paid enterprise version of the app has been recast as Microsoft Teams, but you won't need to use it if everything you use it for is to chat with friends. (Image credit: Google) Works with: iOS, Android, Windows and Mac over the Internet | Maximum number of free users: 32Prein installed on many new Android phonesRecord and fun to useComputer free32 person limit is lower than most the longest Android lacked in its response to FaceTime iPhone and iPad - a built-in video chat app that users could easily rotate right on their device without having to search for something in the Play Store (and ask their friends to download it). Fortunately, Google has finally solved this problem with Duo - a video chat software that is incredibly easy to use and actually available in the standard phone app on most Android phones. Duo also supports a variety of fun features and allows you to record and send video messages so you can join friends and family, even if they're not available at the same time. The duo is also available on iOS, so you are iPhone ton friends have no right to be ashamed that you don't have an Apple phone. It even has the same 32-person limit as Facetime these days. A recent report states that Google plans to fold Duo to Meet, which was originally aimed at more company users - although it's unclear when this might pass. (Video credit: Discord) Works with: iOS, Android, Windows, Mac, Web | Maximum number of free users: 50While streamingGreat gamesRobust PC and mobile applicationsLacks more work-friendly featuresGamers already know Discord as a great source of contact with your friends via text, but do you know Discord supports video chat as well? Also, since it allows you to stream within the app itself, it's a great way to play some games with friends by streaming single-user screen content to the rest of the group. In fact, Tom's manager's staff during quarantine did exactly that several times, and one user shared a quiplash from his computer screen to the rest while playing on the phone. Fortunately, Discord has even gone so far as to temporarily increase its Go Live integrated streaming service from a maximum of 10 people to 50 people. If you upgrade to Nitro, which costs \$10 per month, you can increase the streaming quality to 1080p/60 fps, from a maximum of 720p/30 fps to a free tier. (Image credit: Vincenzo Pinto/Getty Images) Works with: iOS, Mac | Maximum free users: 32Today's best NOPRODUCT dealsUp support for up to 32 people on video calls Each iPhone, iPad and MacFaceTime Audio voice calls makes light, overly available on Apple devices No wonder that FaceTime should appear in this list of the best video chat apps. Apple the software wasn't the first to make video chats, but it was the one that started everything for mobile users and encouraged the industry to make video chats easier and more accessible. Today Today is preinstalled across Apple hardware and supports a lot of really fun and useful features, from cute Animojis, Memojis and stickers to 32 people per call. Because FaceTime also has a voice call component— FaceTime Audio — you can easily route calls through data or Wi-Fi whenever you want, where your conversations will sound infinitely better than your mobile provider's voice network. The only drawback of FaceTime, of course, is that it is exclusive to Apple's hardware. But among all the people who own the iPhone, iPad and Mac, these days it shouldn't be hard to find anything on FaceTime. (Image credit: Facebook) Works with: iOS, Android, Windows and Mac over the Internet | Maximum number of free users: 50Today's best NOPRODUCT offersVisiquestousAvailable on the web and phoneMax 50 people allowed for video callsLacks more work-friendly featuresFacebook Messenger use for video chat beauty is that you probably already signed up for it. As long as you have a Facebook account and a Facebook Messenger app on your phone (or you are signed in to the Facebook Messenger web app on your computer), you can start video chats with your Facebook friends now. Even if you had a Facebook account at the same time and have since turned it off, you can still use Messenger.Just tap the small camera icon in the upper-right corner of the screen and you can start a call with an individual or chat group. Like Skype, up to 50 people can participate in Facebook Messenger video calls at a time - a good sight larger than the maximum 32 video chats supported by Apple FaceTime and Google Duo. In addition, even during video chats, you can still use many other Facebook Messenger features, such as Send chat messages, stickers, and so on. (Video credit: WhatsApp) Works with: iOS, Android | Maximum number of free users: 50End-to-end encrypted 50 people group callsVideo calls that cap on mobile WhatsApp today are one of the most popular messaging alternatives on smartphones, because it is the moment to connect only with a phone number and because many of your friends and family probably already use it (or at least have an account). Until recently, whatsapp's video call feature wasn't the laziest there. But that changed when the max participant limit was raised to 50 because of integration with Facebook Messenger's new rooms feature. The disadvantage of whatsapp video package is that although WhatsApp offers desktop and web applications, video chat is limited to mobile app users. At least WhatsApp video calls are encrypted to the end, like chat messages. In other words, you never need to worry about any of your conversations taken over by rogue interlopers. How to choose the best video chat app if you want all the best videos programs are free, don't be afraid to try each one. There is no risk. But if you want to know where to start, the best advice is assess who needs this programme. If you just want to chat only on your phone, duo, FaceTime and Facebook Messenger will suffice. However, if you and your friends use multiple devices to connect — phones, tablets, computers, etc.— or your need is more professional or more general, we recommend that you tilt toward Zoom, Skype, or Discord. These apps are available on each platform, and while some of them offer paid tiers, you probably won't need to use them if your head count is small enough or the time you plan to chat is relatively short. Free versions have many features to get started from. After all, you'll probably end up with any video chat app your friends and family already want to use - that's how these things tend to go. But if you're looking for a replacement, I hope one of the options on this list will suffice. Enough.
